

When IBMDR donors provide consent (form CD101) for being registered as stem cell donor they are informed that they can be contacted for other not commercial research projects related to either HSCT or IBMDR purposes, or for extended genetic investigation. In case there is a request for using their DNA/Biological samples for study not strictly related with the HSC donation, the donors are asked for providing a specific consent for the only purpose the study indicates.

To process this type of request, IBMDR follows this procedure:

The donor counselling is responsibility of the Donor Center (according to the opinion and suggestion provided by the Donor Committee); the counseling includes also any detail of the study and the maintenance of the donor's anonymity. The donor is free to ask any further detail that may help him in the decision.
